# Example: derive $(A \lor B) \to (B \lor A)$

- 1. Axiom  $P \to (P \lor Q)$ :  $B \to (B \lor A)$
- 2. Axiom  $P \to (Q \lor P)$ :  $A \to (B \lor A)$
- 3. Axiom  $P \to (Q \to (P \land Q))$ :  $(A \to B \lor A) \to ((B \to B \lor A) \to ((A \to B \lor A) \land (B \to B \lor A)))$
- 4. Steps 2 and 3:  $(B \rightarrow B \lor A) \rightarrow ((A \rightarrow B \lor A) \land (B \rightarrow B \lor A))$
- 5. Steps 1 and 4:  $(A \rightarrow B \lor A) \land (B \rightarrow B \lor A)$
- 6. Axiom  $((P \to R) \land (Q \to R)) \to ((P \lor Q) \to R)$ :  $((A \to B \lor A) \land (B \to B \lor A)) \to ((A \lor B) \to (B \lor A))$

7. Steps 5 and 6:  $(A \lor B) \to (B \lor A)$ 

Let X be a set. Logical connectives are interpreted as operations on subsets of X:

- conjunction  $\wedge$  as intersection  $\cap$
- disjunction  $\lor$  as union  $\cup$
- negation ¬ − as complement

Let X be a set. Logical connectives are interpreted as operations on subsets of X:

- $\blacksquare$  conjunction  $\wedge~-$  as intersection  $\cap$
- $\blacksquare$  disjunction  $\lor$  as union  $\cup$
- negation ¬ − as complement <sup>−</sup>

 $(P \to Q) \equiv ((\neg P) \lor Q)$ 

Let X be a set.

Logical connectives are interpreted as operations on subsets of X:

- $\blacksquare$  conjunction  $\wedge~-$  as intersection  $\cap$
- disjunction  $\lor$  as union  $\cup$

■ negation ¬ − as complement <sup>−</sup>

 $(P \rightarrow Q) \equiv ((\neg P) \lor Q)$ ,  $(P \leftrightarrow Q) \equiv ((P \rightarrow Q) \land (Q \rightarrow P))$ 

Let X be a set.

Logical connectives are interpreted as operations on subsets of X:

- conjunction  $\land$  as intersection  $\cap$
- $\blacksquare$  disjunction  $\lor$  as union  $\cup$

■ negation ¬ − as complement <sup>−</sup>

 $(P \to Q) \equiv ((\neg P) \lor Q)$ ,  $(P \leftrightarrow Q) \equiv ((P \to Q) \land (Q \to P))$ Given a mapping from propositional variables (P, Q, etc.) to subsets of X, every formula is mapped to a subset X. e.g.  $P \land Q \mapsto P \cap Q$ 

$$P \lor \neg P \quad \mapsto \quad P \cup \overline{P}$$

Let X be a set.

Logical connectives are interpreted as operations on subsets of X:

- conjunction  $\land$  as intersection  $\cap$
- $\blacksquare$  disjunction  $\lor$  as union  $\cup$

■ negation ¬ − as complement <sup>−</sup>

 $(P \rightarrow Q) \equiv ((\neg P) \lor Q)$ ,  $(P \leftrightarrow Q) \equiv ((P \rightarrow Q) \land (Q \rightarrow P))$ Given a mapping from propositional variables (P, Q, etc.) to subsets of X, every formula is mapped to a subset X. e.g.  $P \land Q \mapsto P \cap Q$  $P \lor \neg P \mapsto P \cup \overline{P} = X$ 

Let X be a set.

Logical connectives are interpreted as operations on subsets of X:

- conjunction  $\land$  as intersection  $\cap$
- $\blacksquare$  disjunction  $\lor$  as union  $\cup$

■ negation ¬ − as complement <sup>−</sup>

 $\begin{array}{ll} (P \to Q) \equiv ((\neg P) \lor Q) \ , \quad (P \leftrightarrow Q) \equiv ((P \to Q) \land (Q \to P)) \\ \text{Given a mapping from propositional variables } (P, Q, etc.) \ \text{to} \\ \text{subsets of } X, \ \text{every formula is mapped to a subset } X. \\ \text{e.g.} & \begin{array}{c} P \land Q \\ P \lor \neg P \end{array} \mapsto \begin{array}{c} P \cap Q \\ P \cup \overline{P} = X \end{array}$ 

Some formulas are always mapped to the whole set X. They are called valid with respect to interpretation in X.

**Theorem.** Let *X* be a set.

**1** All tautologies (= derivable formulas) of the classical logic are valid with respect to interpretation in X.
All tautologies (= derivable formulas) of the classical logic are valid with respect to interpretation in X. The classical logic is sound with respect to this interpretation.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

- All tautologies (= derivable formulas) of the classical logic are valid with respect to interpretation in X. The classical logic is sound with respect to this interpretation.
- **2** If X is non-empty, the tautologies (= derivable formulas) of the classical logic are the only formulas valid with respect to interpretation in X.

- All tautologies (= derivable formulas) of the classical logic are valid with respect to interpretation in X. The classical logic is sound with respect to this interpretation.
- If X is non-empty, the tautologies (= derivable formulas) of the classical logic are the only formulas valid with respect to interpretation in X. The classical logic is complete with respect to this interpretation.

- All tautologies (= derivable formulas) of the classical logic are valid with respect to interpretation in X. The classical logic is sound with respect to this interpretation.
- If X is non-empty, the tautologies (= derivable formulas) of the classical logic are the only formulas valid with respect to interpretation in X. The classical logic is complete with respect to this interpretation.

The language of classical logic does not distinguish different non-empty sets X.

**Definition.** A topological space is a set X together with a collection of subsets of X, called open subsets, satisfying the following axioms:

- The empty subset and X are open.
- The union of any collection of open subsets is also open.
- The intersection of any pair of open subsets is also open.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

**Definition.** A topological space is a set X together with a collection of subsets of X, called open subsets, satisfying the following axioms:

- The empty subset and X are open.
- The union of any collection of open subsets is also open.
- The intersection of any pair of open subsets is also open.

**Example.**  $X = \mathbb{R}^n$ . A subset *P* of *X* is open iff for any point *x* in *P*, some open ball containing *x* is contained in *P*.

**Definition.** The complement of an open subset is called closed.

(ロ)、(型)、(E)、(E)、 E) の(の)

**Definition.** The complement of an open subset is called closed.

**Definition.** Given a subset P of X, the interior of P is the largest open subset of P.

**Example.**  $X = \mathbb{R}$ , P = [a, b], interior(P) = (a, b).

**Definition.** The complement of an open subset is called closed.

**Definition.** Given a subset P of X, the interior of P is the largest open subset of P.

**Example.**  $X = \mathbb{R}$ , P = [a, b], interior(P) = (a, b).

**Definition.** Let X and Y be topological spaces. Then  $f: X \to Y$  is continuous if for any open subset U of Y,  $f^{-1}(U)$  is an open subset of X.

# Quantifiers

- " $\forall x$ " means "for all x"
- " $\exists x$ " means "there exists x"

## Quantifiers

- " $\forall x$ " means "for all x"
- " $\exists x$ " means "there exists x"

**Example.** Let *P* be a subset of  $\mathbb{R}^2$ . Then

$$\forall x \in P \ \exists r \in \mathbb{R} \ \Big( (r > 0) \land \forall y \in \mathbb{R}^2 \big( \mathsf{dist}(x, y) < r \to y \in P \big) \Big)$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

means that P is open.

## Quantifiers

- " $\forall x$ " means "for all x"
- " $\exists x$ " means "there exists x"

**Example.** Let *P* be a subset of  $\mathbb{R}^2$ . Then

$$\forall x \in P \ \exists r \in \mathbb{R} \ \Big( (r > 0) \land \forall y \in \mathbb{R}^2 \big( \mathsf{dist}(x, y) < r \to y \in P \big) \Big)$$

means that P is open.

The language with quantifiers is very expressive but undecidable.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

# Compromise: modality

The classical logic is extended with an operator  $\Box$ . Interpretations of  $\Box P$ :

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

- P is known
